

Milestone 3

Completed Features

- Account creation and login
 - Users are able to successfully create and access their personal Homely account
- Categories
 - Users are able to view the pending supplies, payments, and chores
- Add Item
 - Users are able to add to their list of supplies, payments, and chores
- Styling
 - The interface is user-friendly and easy to navigate
 - UI is polished and looks professional
- Calendar
 - Users are able to view upcoming responsibilities such as payments, chores, etc.

Worked during Demo

- All of the previously mentioned completed features were displayed and worked correctly; however, we are still finishing the more complex aspects of the calendar.

Issues Faced

- Our biggest issue was the relative inexperience of most of the team when dealing with ReactJS. We had to rely on the expertise of one of our members, as well as a lot of online learning tutorials to figure out how to code the project.
- Another issue occurred with the payment model. We were going to use Venmo to connect our users with their payment site, but Venmo discontinued its use on desktop. We have decided to re-evaluate our payment plan by either going ahead with PayPal or giving the users several useful links to the sites.
- No issues arose during the demonstration of the project.

Suggestions from TA

- TA had no suggestions (other than to keep working on it)!
