Project: Homely

Team: Umar Haroon, Jack Santaniello, Emma King, Edward Alders, Tim Kan

Project Description: Homely is a task manager within the shared "home" where all the roommates can see a chores list, a grocery list, and even a log of payments. Roommates could add chores that need to be done, what items to get at the grocery store, or even request payments from other roommates for utilities, gas, uber costs, etc. Having a platform for all the roommates to see the main aspects of their home allows people to be more inclined to do their part in keeping the home in a better state, preventing bad roommate incidents. We wanted to build an app that would allow roommates to connect, and decipher through their everyday tasks. With all of us having roommates we wanted a simple design that would be easy to use. The main problems roommates have are: chores and payments, so making sure we incorporated features that would help resolve those issues. By adding a calendar and feature to input tasks the users can communicate with each other in a non aggressive manner.

Project Tracker: https://3.basecamp.com/4401862/buckets/15557261/todosets/2379757597

To track the progress of our project and to make sure that everything will be completed on time, we used the "To-dos" function within Basecamp. This function allowed everyone on the team to see what is on the agenda for the week as well as what is behind schedule:

Along with the "To-Dos" basecamp also has a feature, for automatic check ins, where we can answer question as a team to keep track of where we are at on our timeline:

Automatic Check-ins

+ New Question

Asking 5 people every Monday at 9am.
What are you working on this week?

Asking 5 people every other Friday at 4:30pm.
How do you think the project's been going so far?

This check-in is paused, nobody is being asked.
Are you blocked on anything?

Contribution:

The following are screenshots of the "commits" of all 7 different branches through the semester from Github. Each commitment has its own description talking about the feature we are changing as well as what branch it's being added to.

NOTE: There aren't as many commits made by Jack and Tim compared to Umar because (Jack, Umar, Tim) live together and we pair programmed from Umar's account.

Deployment:

We used netlify to deploy the site. It runs off of the master branch so when there is a release version, a merge to master would update the site. The site runs at

https://homely-web.netlify.app

Running the site locally is based on a combination of firebase emulators and reactJS. Cloning the repository and running the repository would load the site, but it needs the firebase emulator to properly run. Instructions for that are in the readme.

https://github.com/Umar-M-Haroon/HomelyWeb

MORE INSTRUCTIONS BELOW THAT WOULD BE IN THE README IF THE REPO WASN'T PUBLIC

REACT_APP_API_KEY=AIzaSyDX0Rkb6Udj67Qz5nDXLl3lumD3zhhjc1U

REACT_APP_AUTH_DOMAIN=homely-47bc5.firebaseapp.com

REACT_APP_DATABASE_URL=https://homely-47bc5.firebaseio.com

REACT_APP_PROJECT_ID=homely-47bc5

REACT_APP_STORAGE_BUCKET=homely-47bc5.appspot.com

REACT_APP_MESSAGING_SENDER_ID=1037565901883

REACT_APP_APP_ID=1:1037565901883:web:9522d192572cf7a6cd301e

REACT_APP_MEASUREMENT_ID=G-56TFWYNS8C

FIRESTORE_EMULATOR_HOST=localhost:8080

Tests and the emulator won't work unless you're a collaborator on the firebase project, which is heavily locked down and can't happen to prevent any security breaches. Just remove the emulator localhost block in the firebase.js and use those keys
